CODIB-D-64
9 September 1960

UNITED STATES INTELLIGENCE BOARD

COMMITTEE ON DOCUMENTATION

Haloid Xerox Inc. PROXI Demonstration

1. Arrangements have been made with Haloid Xerox Inc. of Rochester for a demonstration of a xerographic method for quickly preparing projectable slides - a method they call PROXI (Projection by Reflection Optics of Xerographic Images). In this system, a cathode-ray tube image is projected onto a charged xerographic plate to create the electrostatic latent image. The plate is then developed with a charged powder and instantly illuminated with a focused beam of light which is specularly reflected at high efficiency from the plate surface and imaged by a lens to create the display.

2. This method will be demonstrated at the Shoreham Hotel at the High Speed Processing Symposium (14-15 October 1960). A separate demonstration for CODIB has been arranged for Monday, 17 October at 1000 hours in the Conference Room, East Building, CIA.

3. Would you please give the names of those planning to attend this CODIB presentation to the Secretary on by 13 October 1960.
